

OPSDesk

Internal Work Management Platform

Product Requirements Document (PRD)

1. Executive Summary

Equitywala currently tracks daily activities, client meetings, call volumes, branding tasks, social media posts, and webinar schedules across multiple departments using a collection of Excel spreadsheets. These files are maintained per-person and per-department, require manual updates, offer no real-time visibility, and produce no actionable reporting without additional effort.

This PRD defines the requirements for a web-based OpsDesk that replaces all existing Excel tracking with a structured, role-governed application. Every data point currently captured in the Research, Data Management, and Brand & Marketing departments will be migrated into typed digital forms. The platform will support custom roles, manager-level approvals, dashboards, and scheduled exports.

The platform is intended to be extensible additional departments can be onboarded without structural changes to the core system.

2. Problem Statement

The following pain points were identified:

- No single source of truth. Data is across individual files per department and per person.
- No access control. Anyone with a file can see, edit, or accidentally delete all records.
- No approval workflow. Managers cannot review, comment on, or approve daily logs before they are considered final.
- No real-time visibility. Reporting requires manual aggregation across sheets and months.
- Error-prone data entry. Date columns store serial numbers instead of formatted dates. Fields are inconsistently filled.
- No notifications. There is no mechanism to remind employees to fill their logs or alert managers of missing entries.
- Scalability gap. Adding a new department or employee requires creating a new file and manually replicating structure.

3. OpsDesk :Feature Mapping

Concept	Adopted in OpsDesk?	OpsDesk Equivalent / Approach
Work Items (Issues / Tasks)	Yes	Log Entries. Every daily log, meeting report, call log, or branding task is a structured work item, but with department-specific typed fields
Workflow States (To Do → In Progress → Done)	Yes	Draft → Submitted (Pending) → Approved / Rejected. States are tightly coupled to the approval process

Concept	Adopted in OpsDesk?	OpsDesk Equivalent / Approach
		rather than generic progress tracking.
Kanban Board	Yes	Manager Approval Board: columns are Pending, Approved, Rejected. Managers can drag entries across columns to change status. Employees see a read-only board of their own entries. Toggle between List view (default) and Board view.
Role-Based Access Control	Yes	Three roles: Admin, Manager, Employee. Permissions are enforced at both the API (JWT + RBAC middleware) and database level (Neon DB row-level security).
Comments & @Mentions on Issues	Yes	Every log entry has a comment thread. Employees and Managers can post comments. @mentions notify the tagged user via in-app notification.
Activity Feed	Yes	Home screen activity feed showing recent submissions, approvals, rejections, and comments across the logged-in user's department. Admins see cross-department feed.
Global Search	Yes	Global search bar covering all modules and departments (Admin sees all; others scoped by role). Search by keyword, employee name, date, or module type.
Filters & Saved Views	Yes	Per-module filters (date range, status, employee). Saved filter presets are deferred to v2.
Dashboards & Reporting	Yes	Reports match the exact Excel formats Equitywala already uses weekly meeting summaries, monthly department totals, branch-wise breakdowns.
Audit Log	Yes	Every create, edit, approve, and reject action is logged with actor, timestamp, and field-level diff. Admin-only access.
Notifications (In-app + Email)	Yes	In-app + email for approvals, rejections, and comments. Additionally: daily submission reminders per employee (configurable time), manager digest for pending queue.
Epic → Story → Sub-task Hierarchy	Yes scoped	Parent-child grouping added for Brand & Marketing department. A Campaign (parent) can contain multiple Branding Tasks or Social Media Posts (children). Other departments use flat entries.
Issue Templates	Yes	Every department module is a pre-defined typed form (fixed fields, dropdowns, required flags).templates ensures data consistency across the team.
Sprints / Scrum Board	yes	Work is logged by sprint cycles.
Roadmaps / Gantt Charts	Yes	Charts
Story Points / Estimation	yes	Time Spent (hours) is captured in Branding Activity logs as an actuals field
Integrations Marketplace	yes	OpsDesk v1 has third-party integrations. Zoom API, CRM integrations.

Concept	Adopted in OpsDesk?	OpsDesk Equivalent / Approach
AI Agents & Automation Rules	yes	Deferred to future versions.
Multi-project / Multi-workspace	yes	

4. Goals and Non-Goals

4.1 Goals

- Replace all department-level Excel tracking with a unified web application.
- Enforce role-based access so employees see only what they need, and managers see their team.
- Enable each employee to log their own work daily, with managers able to edit and approve entries.
- Provide dashboards and export functionality (PDF and Excel) for monthly and cumulative reporting.
- Send both in-app and email notifications for log reminders and approval events.
- Support onboarding of new departments without code changes to the core system.
- Payroll, leave management, or HR functions.

4.2 Non-Goals

- The platform is strictly internal.
- No mobile application in this version. Web only.

5. User Roles and Permissions

The platform defines three roles. All users authenticate with email and password and also via google. Role assignment is managed by the Admin.

Role	Who	What They Can Do
Admin	System administrator	Full access to all departments and all records. Create/edit/deactivate users. Assign roles and departments. Configure department modules. View all dashboards. Export any data.
Manager	Department head or team lead	View all entries within their assigned department. Edit and approve/reject employee log entries. Add entries on behalf of team members. View department-level dashboards. Export department data.
Employee	Individual team members	Log their own entries across all modules active for their department. View their own history and status (pending/approved/rejected). Cannot view other employees'

Role	Who	What They Can Do
		entries. Receive notifications for approvals and reminders.

6. Department Modules

The platform organizes tracking into department-specific modules. Each department is configured with one or more modules. New departments can be added by the Admin without code changes.

6.1 Research Department

Module: Daily Activity Log

Field	Type	Required
Date	Date picker	Yes
Day of Week	Auto-computed	yes
Activity Description	Long text (multi-line)	Yes
Status	System field	yes
Manager Remarks	Text	yes

Rules:

- The system prevents duplicate date entries.
- Employees can edit their entry until the manager approves it.
- If an entry is rejected, the employee is notified and can resubmit.

6.2 Data Management Department

This department uses four modules:

6.2.1 Weekly Meeting Report

Tracks physical meetings, online meetings, calls, service calls, and service meetings logged by each team member per weekly review cycle (every Friday).

Field	Type	Required
Week Ending Date (Friday)	Date picker	Yes
Physical Meetings	Integer	Yes
Online Meetings	Integer	Yes
Calls	Integer	Yes
Service Calls	Integer	Yes

Field	Type	Required
Service Meetings	Integer	Yes

Rules:

- Monthly and cumulative totals are computed automatically by the system.
- Manager can edit counts before approving.

6.2.2 Daily Meeting Attendance Log

Tracks per-day meeting attendance broken down by mode: Physical, Zoom, and Beyond (a third-party webinar platform).

Field	Type	Required
Date	Date picker	Yes
Physical Meetings Attended	Integer	Yes
Zoom Meetings Attended	Integer	Yes
Beyond Sessions Attended	Integer	Yes

- Manager sees daily and monthly totals per person and for the full team.

6.2.3 52 Week Webinar Series Planner

Content calendar for the weekly B2C webinar series. This is a shared department-level log, not per-employee.

Field	Type	Required	Notes
Series Number	Integer (auto-increment)	Yes	Auto-assigned.
Scheduled Date	Date picker	Yes	
Topic Title	Text	Yes	
Speaker Name	Text	Yes	
Speaker Designation / Experience	Text	yes	
Event Mode	Dropdown	Yes	Online / Physical / Hybrid
Status	Dropdown	Yes	Planned / Confirmed / Completed / Cancelled
Notes	Text	yes	

- Only Managers and Admins can create or edit series entries.
- Employees can view the series calendar.

- Suggestions for future topics can be submitted by any employee and are shown in a separate 'Suggestions' view for the manager to promote to the calendar.

6.2.4 Branch-Wise Meeting Data

Tracks meeting counts categorized by branch, used for regional reporting.

Field	Type	Required
Month	Month picker	Yes
Branch Name	Text / Dropdown	Yes
Meeting Type	Dropdown (Physical / Online / Call)	Yes
Count	Integer	Yes

6.3 Brand & Marketing Department

This department uses four modules:

6.3.1 Zoom / Webinar Link Management

Field	Type	Required
Date	Date picker	Yes
Meeting Title / Purpose	Text	Yes
Host / Organiser	Text	Yes
Scheduled Date	Date picker	Yes
Scheduled Time	Time picker	Yes
Duration (minutes)	Integer	Yes
Zoom Link / Meeting ID	Text	Yes
Sent To	Text	No
Status	Dropdown	Yes
Notes	Long text	yes
Attendee Count	Integer	yes

6.3.2 Data Management Log

Field	Type	Required
Date	Date picker	Yes
Task / Data Set Description	Text	Yes
Type	Dropdown	Yes
Source / System	Text	yes

Field	Type	Required
Action Taken	Text	Yes
Status	Dropdown	Yes
Records Handled	Integer	No
Verified By	Text	No
Remarks	Text	yes

6.3.3 Call Log

Field	Type	Required
Date	Date picker	Yes
Company / Contact Name	Text	Yes
Client Type	Dropdown	Yes
Phone / Email	Text	Yes
Call Time	Time picker	Yes
Duration (minutes)	Integer	Yes
Purpose of Call	Text	Yes
Outcome / Result	Text	Yes
Follow-up Required?	Yes / No toggle	Yes
Notes	Long text	yes

6.3.0 Campaign Hierarchy (Parent–Child Grouping)

Level	Record Type	Who Creates It	Children It Can Have
Parent	Campaign	Employee or Manager	Branding Activity Logs, Social Media Logs, Call Logs related to this campaign.
Child	Any B&M log entry	Employee	

- A Campaign record has: Campaign Name, Start Date, End Date, Platform / Medium, Status (Active / Completed / On Hold), Owner (employee), and Description.
- When creating any Brand & Marketing log entry, the employee can optionally link it to an existing Campaign via a dropdown
- The Campaign detail page shows all child entries grouped by type, with aggregate stats (total hours spent, total posts, total calls).
- Campaign status rolls up automatically: if all children are Done / Approved, Campaign status suggests Completed.
- Managers can view all campaigns across the department on a Campaign Board (card per campaign, grouped by status).

6.3.4 Branding Activities Log

Field	Type	Required
Date	Date picker	Yes
Activity / Task Title	Text	Yes
Activity Type	Dropdown (Video / Image / Copy / Campaign / Other)	Yes
Platform / Medium	Text	yes
Status	Dropdown (In Progress / Done / On Hold)	Yes
Time Spent (hours)	Decimal number	Yes
Deliverable / Output Description	Text	yes
Remarks	Text	yes

6.3.5 Social Media Management Log

Field	Type	Required
Date	Date picker	Yes
Post / Content Title	Text	Yes
Platform	Dropdown (Instagram / LinkedIn / YouTube / WhatsApp / Other)	Yes
Content Type	Dropdown (Image / Video / Reel / Story / Text)	Yes
Scheduled Time	Time picker	yes
Status	Dropdown (Scheduled / Posted / Delayed / Cancelled)	Yes
Likes	Integer	No
Comments	Integer	No
Shares / Reach	Integer	No
Remarks	Text	yes

7. Approval Workflow

Every log entry submitted by an employee goes through the following states:

State	Who Sets It	Description
Draft	Employee	Entry saved but not yet submitted. Only the employee can see it.
Submitted / Pending	Employee	Entry submitted for review. Employee can no longer edit without rejection.
Approved	Manager	Entry is accepted. No further changes allowed.
Rejected	Manager	Entry returned with remarks. Employee is notified and can resubmit.

- Managers can approve or reject entries in bulk (e.g., all pending entries for the week).
- Managers can edit an entry before approving it, and the system logs who made the edit and when.
- Employees receive an in-app notification and an email when their entry is approved or rejected.
- Employees receive a daily reminder notification at a configurable time (default: 6:00 PM) if no entry has been submitted for that day.

7.1 Approval Views List and Board

Managers have two views for the approval queue, toggled via a control in the top-right of the approvals screen:

View	Default?	Behaviour
List View	Yes (default)	Tabular list of all entries sorted by submission date (oldest first). Columns: Employee, Module, Date, Submitted At, Status. Inline Approve / Reject buttons per row. Bulk selection checkbox with bulk action bar.
Board View (Kanban)	No (toggle)	Three columns: Pending, Approved, Rejected. Each entry is a card showing employee name, module, date, and a preview of the first field. Managers drag cards between columns to change status. Dropping onto Approved or Rejected opens a confirmation modal (with optional remarks field). Inspired by Jira's Kanban board.

- Admin can view the board for any department by switching department from a dropdown.

8. Dashboards and Reporting

All dashboards open with an Activity Feed at the top of the home screen, followed by summary cards and module-specific views below.

8.1 Home Screen Activity Feed

Visible immediately after login for all roles.

Role	Feed Shows
Employee	Their own recent submissions, approval / rejection events, comments on their entries, @mentions, and daily reminder events. Last 30 items.
Manager	All submissions from their department team, approval actions taken, comments posted by any team member, and @mentions. Last 50 items.
Admin	Cross-department feed all of the above across every department. Filterable by department. Last 100 items.

- Each feed item is clickable and opens the relevant log entry detail page.
- Feed items are grouped by date (Today, Yesterday, Earlier this week, Earlier this month).
- Feed auto-refreshes every 60 seconds. A 'New activity' banner appears at the top when new items arrive without a full page reload.

8.2 Global Search

A persistent search bar in the top navigation bar, available on every page for all roles.

Search Capability	Details
Scope	Admin: all departments and all modules. Manager: their assigned departments. Employee: their own entries only.
Searchable fields	Employee name, module type, date (YYYY-MM-DD or natural language like 'June 2026'), keywords in text fields (activity description, call purpose, task title, remarks), comment text.
Results grouping	Results are grouped by module type (Daily Logs, Call Logs, Social Media Logs, etc.) with a count per group.
Keyboard shortcut	Ctrl+K (or Cmd+K on Mac) opens the search bar from anywhere in the app.
Performance	Search is powered by PostgreSQL full-text search (tsvector / tsquery) on indexed columns. Response target: under 500ms for up to 50,000 records.

8.3 Employee Dashboard

- Personal log history with filters by date range, module, and status.
- Monthly summary: total entries, approved count, pending count, rejected count.
- Streak indicator: consecutive days with an approved entry.
- Upcoming: any scheduled webinar series entries visible to all.

8.4 Manager Dashboard

- Team overview: all employees in the department with their submission status for the current day and current week.
- Pending approvals queue: sorted by submission date, oldest first. Toggle between List view and Board (Kanban) view.

- Department-level monthly summary: aggregated counts per module (e.g., total Physical meetings, total Calls, total Zoom sessions).
- Weekly meeting report totals auto-calculated and displayed in a tabular view matching the existing Excel layout.
- Top performers by volume for each metric within the month.

Grid Element	Details
Layout	Rows = team members. Columns = days of the current week (Mon–Fri). Optionally extendable to the current month.
Cell states	Green = Approved entry exists. Yellow = Submitted, pending review. Red = No entry submitted. Grey = Weekend / holiday.
Drill down	Clicking a cell opens the entry detail (or a blank form pre-filled with that employee's name and date if no entry exists — manager can create on behalf).
Export	Grid can be exported as a weekly attendance/compliance summary in Excel.

8.5 Admin Dashboard

- Cross-department summary: all departments in one view.
- User management: active users, last login, entry counts.
- System health: notification delivery status, any failed exports.

8.6 Exports

All dashboards and list views support export in two formats:

Export Type	Scope	Format
Monthly department report	All modules, one department, one month	Excel (.xlsx) — matches existing sheet structure
Individual employee report	All modules, one employee, selected date range	Excel (.xlsx) or PDF
Weekly meeting summary	Weekly Meeting Report module, all employees, one month	Excel (.xlsx)
52 Week Series calendar	Full series list with status	Excel (.xlsx) or PDF
Full data export	Admin only — all departments, all time	Excel (.xlsx)

9. Notifications

Trigger	Recipient	Channel	Timing
Daily log not submitted by cutoff	Employee	In-app + Email	Configurable daily time (default 6 PM)
Manager approves an entry	Employee	In-app + Email	Immediately on approval

Trigger	Recipient	Channel	Timing
Manager rejects an entry	Employee	In-app + Email	Immediately on rejection, includes rejection remarks
New entry submitted for review	Manager	In-app	Immediately on submission
Multiple pending entries in queue (> 5)	Manager	Email	Daily digest at 9 AM if queue is non-empty
New department member added	Manager + Employee	Email	On account creation

- Employees can configure their preferred daily reminder time in account settings.
- Managers can mute in-app submission notifications and rely on the daily digest instead.
- All email notifications are sent via an SMTP relay configured at the system level by the Admin.

10. System-Wide Features

10.1 Authentication

- Email and password login. Forgot password via email OTP.
- Session expires after 8 hours of inactivity.
- Admin can force logout or deactivate any user account.

10.2 Department Configuration

- Admin can create a new department and assign one or more modules to it.
- Each module can be toggled on or off per department.
- Employees are assigned to exactly one department. Admins can reassign.
- Managers can be assigned to multiple departments.

10.3 Audit Log

- Every create, edit, approve, and reject action is logged with the user, timestamp, and changed fields.
- Audit log is accessible to Admin only.
- Audit records are retained for a minimum of 12 months.

10.4 Data Integrity

- Date fields are stored as ISO 8601 timestamps in the database. No serial numbers.
- Integer fields (meeting counts, call counts) have a minimum value of 0.
- Duplicate date-employee entries are blocked at the database constraint level, not just at the application level.
- Soft delete: records are never permanently deleted. Admins can restore deleted entries.

11. Technical Requirements

Layer	Technology	Notes
Backend	FastAPI (Python)	REST API. Async endpoints. Pydantic models for all request/response schemas.
Frontend	React	Single-page application. React Query for server state. React Hook Form for all log entry forms.
Primary Database	Neon DB (PostgreSQL)	Serverless Postgres. All structured data. Row-level security policies for role enforcement.
Cache / Queue	Redis	Session store. Notification job queue. Rate limiting on login and export endpoints.
Background Jobs	FastAPI + Redis Queue (RQ) or APScheduler	Daily reminder notifications. Report generation for large exports.
Authentication	JWT (access token + refresh token)	Access token: 8 hour expiry. Refresh token: 7 days.
Email	SMTP via configurable relay (e.g., AWS SES or SMTP2GO)	Configured by Admin in system settings.
Export	openpyxl (Excel), ReportLab or WeasyPrint (PDF)	Generated server-side, streamed as file download.
Hosting	To be decided	Backend and frontend can be containerised (Docker). Neon DB is cloud-native.
